PROFESSIONAL SUMMARY

Senior Site Reliability Engineer and Platform Engineer with 8+ years of experience building and operating cloud-native infrastructure at scale. Proven track record delivering observability platforms across 15+ SaaS products, reducing cloud costs by 20-30%, and cutting incident resolution time by 70% through automation. Deep expertise in Kubernetes, Terraform, AWS/Azure, and GitOps. Experienced leading SRE practices, SLO frameworks, and disaster recovery across healthcare, fintech, and public sector environments.

PROFESSIONAL EXPERIENCE

Senior Site Reliability Engineer

Euna Solutions, Toronto, ON (Remote) | Jul 2024 – Present

- Designed and implemented a centralized observability platform for 15+ SaaS products, integrating Prometheus, Grafana, Datadog, ELK stack, and OpenTelemetry — reducing mean time to detection (MTTD) and eliminating critical blind spots across multi-tenant environments.
- Led incident management lifecycle using PagerDuty and FireHydrant; built auto-remediation runbooks and playbooks that cut manual intervention in incident resolution by 70% and improved on-call engineer experience.
- Established a global SLO/SLI framework across 15+ products, aligning reliability targets with business objectives and enabling data-driven error budget decisions.
- Automated backup and recovery processes to ensure RPO/RTO targets are met; architected DR runbooks covering critical failure scenarios across AWS and Azure.
- Initiated FinOps practices including resource rightsizing, reserved instance strategy, and waste detection — reducing monthly cloud spend by 20%.
- Implemented HashiCorp Vault, IAM policies, and TLS encryption to meet PCI DSS compliance requirements and strengthen secrets management across services.

Senior Site Reliability Engineer

Bank of Montreal (BMO), Toronto, ON | Sep 2023 – Jun 2024

- Managed a fleet of 2,000+ Linux and Windows servers using Ansible playbooks for configuration management, cutting manual intervention by 60% and reducing configuration drift across regulated environments.
- Automated infrastructure provisioning with Terraform, reducing configuration errors by 25% and standardizing deployments across AWS and Azure.
- Enhanced GitHub Actions and ArgoCD deployment pipelines, accelerating release cycles by 30% while maintaining SOC2, HIPAA, and PCI compliance controls.
- Enforced server hardening standards and automated security patching across the fleet, improving audit readiness and reducing vulnerability exposure windows.

DevOps Engineer

Exodus Movement, Remote | Feb 2022 – Oct 2023

- Automated Kubernetes cluster provisioning using Terraform and Helm, reducing environment setup time by 40% and enabling self-service deployments for engineering teams.

- Built proactive monitoring and alerting using Prometheus, Grafana, and the ELK stack, significantly reducing mean time to detection (MTTD) across blockchain infrastructure serving millions of users.
- Implemented canary releases and feature toggles to achieve zero-downtime deployments across mobile and desktop application release cycles.
- Developed Python automation scripts that eliminated over 50 hours of manual operational work per month.

Build and Release Engineer

Exodus Movement, Remote | May 2021 – Feb 2022

- Optimized Jenkins CI/CD pipelines, reducing build times by 20% and enabling faster feature delivery across multiple product tracks.
- Implemented Puppet and Flux for infrastructure deployments, improving repeatability and reducing configuration errors across distributed systems.
- Maintained Nexus and Artifactory artifact repositories, standardizing dependency management and improving build reliability.
- Integrated Prometheus and Grafana to track build failures and establish baseline reliability metrics for release pipelines.

Cloud Engineer

Busha, Lagos, Nigeria (Remote) | Dec 2018 – Apr 2021

- Automated infrastructure provisioning on AWS and Azure using Terraform, improving deployment consistency and reducing manual provisioning errors.
- Defined and implemented SLIs, SLOs, and SLAs for key platform services, establishing reliability baselines that improved client satisfaction.
- Built and managed Jenkins-based CI/CD pipelines, enabling secure and consistent release cycles for the crypto exchange platform.
- Developed monitoring systems that improved system uptime and reduced customer-facing incidents.

Product Manager

SureGifts, Lagos, Nigeria | Mar 2015 – Aug 2018

- Defined and executed product roadmaps for a gift card and loyalty platform, aligning technical feasibility with business growth objectives.
- Led cross-functional Agile teams through sprint planning and delivery, ensuring on-time release of new features and platform enhancements.
- Collaborated with engineering, marketing, and sales to translate business requirements into prioritized technical solutions, increasing customer engagement.

EDUCATION

Master of Science, Food Science and Processing Technology

University, | 2014

Bachelor of Science, Food Science & Technology

University, | 2010

SKILLS

Cloud Platforms: AWS, Azure, GCP

Infrastructure & IaC: Terraform, Ansible, AWS CDK, CloudFormation, Packer, HashiCorp Vault

Containers & Orchestration: Kubernetes, Docker, Helm, ArgoCD, Istio, Service Mesh

CI/CD: GitHub Actions, GitLab CI, Jenkins, CircleCI, Azure DevOps, Flux

Observability & Monitoring: Prometheus, Grafana, Datadog, OpenTelemetry, ELK/EFK Stack, New Relic, CloudWatch, Coralogix, Checkly

Incident Management: PagerDuty, FireHydrant, StatusPage, Pingdom, Jira

Security & Compliance: IAM, RBAC, AWS WAF, HashiCorp Vault, Checkov, tfsec, SSL/TLS, PCI DSS, SOC2, HIPAA

Programming & Scripting: Python, Bash, Go, HCL, YAML

CERTIFICATIONS

Certified Kubernetes Administrator (CKA) | Linux Foundation |

AWS Certified Developer – Associate | Amazon Web Services |

AZ-104: Azure Administrator Associate | Microsoft |

PROJECTS

k8s-cost-radar

Python, Kubernetes, Rich CLI

- CLI tool that scans Kubernetes clusters for resource waste, estimates monthly cloud cost by namespace, and generates actionable rightsizing recommendations. Includes demo mode for environments without live cluster access.

Link: github.com/oginnidipo/k8s-cost-radar

EKS Production Cluster

Terraform, AWS EKS, VPC, Autoscaler, EFS CSI

- Production-grade modular EKS cluster with VPC, managed node groups, cluster autoscaler, and EFS CSI driver. Fully automated with Terraform.

Link: github.com/oginnidipo/eks-demo

Kubernetes Observability Stack

Prometheus, Grafana, AlertManager, OpenTelemetry

- Production-ready observability stack for Kubernetes with distributed tracing, metrics collection, and alerting pipelines.

Link: github.com/oginnidipo/k8s-observability-stack
