

DEVOPS ENGINEER

DevOps/Site Reliability Engineer with 8+ years of experience delivering resilient, scalable, and secure cloud-based solutions. Adept in Kubernetes, Terraform, Ansible, AWS, Azure, and CI/CD pipelines. I specialize in designing high-availability architectures, building robust automation frameworks, and mentoring teams to drive operational excellence. Passionate about leveraging observability and cloud-native tools to propel business success.

TECHNOLOGY & TOOLS

- ❖ Cloud Platforms: AWS, Azure, GCP
- ❖ Infrastructure & Automation: Terraform, Ansible, AWS CDK, CloudFormation, Packer, HashiCorp Vault, Kafka
- ❖ CI/CD & Version Control: Git, GitHub Actions, Bitbucket, Jenkins, CircleCI, Azure DevOps
- ❖ Containerization & Orchestration: Docker, Kubernetes (Helm, ArgoCD, k9s, Lens, Istio, Service Mesh)
- ❖ Security & Compliance: IAM, RBAC, AWS WAF, Checkov, Tfsec, SSL/TLS
- ❖ Observability & Monitoring: Datadog, Prometheus, Grafana, ELK/EFK Stack, New Relic, CloudWatch
- ❖ Programming & Scripting: Python, Bash, YAML, HCL, Groovy, Go
- ❖ Networking & Systems Administration: Nginx, TCP/IP, UDP, DNS, VPC, VPN, Linux
- ❖ Databases: MySQL, MongoDB, PostgreSQL, DynamoDB, Aurora, Redshift
- ❖ Incident Management: PagerDuty, FireHydrant, Jira, Status Page, Pingdom, Slack/Teams

PROFESSIONAL EXPERIENCE

Senior Site Reliability Engineer, *Euna Solutions*

Sept 2024 - Present

Tools & Technologies: Docker, Kubernetes, AWS, Azure, Terraform, DataDog, Python, Checkly, Coralogix

- ❖ Observability Strategy: Designed and implemented a centralized observability framework for 15+ products, integrating Prometheus, Grafana, DataDog, ELK stack, and OpenTelemetry to provide real-time insights into system performance.
- ❖ Incident Management & Response: Led and refined the JIRA, PagerDuty, and FireHydrant-driven incident response process, reducing MTTR (Mean Time to Resolution) through automation and improving on-call workflows.
- ❖ Automated Monitoring & Alerts: Built self-healing monitoring pipelines using Pingdom, Datadog, and CloudWatch, minimizing false positives and ensuring proactive detection of system anomalies.
- ❖ Reliability Engineering: Developed auto-remediation scripts, runbooks, and playbooks, cutting manual intervention in incident resolution by 70% and increasing system uptime.
- ❖ Cloud Application Integration & CRM Platforms: Designed and supported REST-based PHP services integrated with CRM systems, leveraging ElastiCache for performance optimization while applying AWS Solutions Architect best practices to build scalable and reliable cloud applications.
- ❖ SRE & Cloud-Native Service Engineering: Worked as a Software Engineer supporting end-to-end backend services built with TypeScript and Ruby, leveraging SQL and Postgres for data management and deploying scalable workloads on AWS using Lambda and EC2; applied strong problem solving and SRE practices to enhance reliability across cloud infrastructure environments.
- ❖ Platform Automation & Developer Enablement: Contributed as a Software Developer within information technology teams, building backend services with R and TypeScript, managing SQL-based data workflows,

and leveraging GitLab pipelines and Google Cloud tooling to support continuous learning, scalable cloud infrastructure, and reliable software delivery.

- ❖ **Disaster Recovery:** Automated backup and recovery processes to ensure high availability and business continuity, mitigating data loss risk (RPO) and minimizing downtime (RTO) in the event of a critical failure or disaster.
- ❖ **Status & Communication:** Maintained public and internal StatusPage updates, ensuring transparent communication with stakeholders and reducing incident-related escalations.
- ❖ **Cross-Product Insights:** Established a global SLO/SLI framework across 15+ products, aligning reliability goals with business objectives and improving overall system resilience.
- ❖ **Security Enhancement:** Implemented HashiCorp Vault, IAM policies, and TLS encryption to ensure compliance (PCI DSS) and strengthen system security.
- ❖ **Cost Optimization:** Initiated resource-monitoring strategies that reduced monthly cloud expenses by 20%.

Senior Site Reliability Engineer, *BMO*

Sep 2023 - Jun 2024

Tools & Technologies: *Linux/Unix, Docker, Kubernetes, AWS, Terraform, Grafana, Prometheus, Datadog*

- ❖ **Configuration Management:** Developed and deployed Ansible playbooks to manage over 2,000 Linux and Windows servers, reducing manual intervention by 60%.
- ❖ **Workflow Integration:** Integrated Ansible automation to streamline deployments and maintain uptime.
- ❖ **Security & Compliance:** Enforced server hardening and automated patching, boosting overall system security and compliance.
- ❖ **Microservices & Platform Engineering:** Developed and supported microservices using Java, JavaScript, and C++, applying computer science fundamentals to strengthen information technology platforms while leveraging Yarn for dependency management and testing frameworks to ensure reliability across operating systems.
- ❖ **Quality Engineering & Cloud Validation:** Worked as a QA Engineer validating ECS-based environments through automated testing and PowerShell scripting, applying strong problem solving to verify clustering behavior and support artificial intelligence workloads while fostering a collaborative engineering culture.
- ❖ **Infrastructure Automation:** Automated provisioning with Terraform, leading to a 25% reduction in configuration errors and streamlined deployments.
- ❖ **Software Architecture & Cloud Platform Engineering:** Designed scalable software architecture across front end and back end services using React, Vue, Node.js, Golang, and Flask, integrating Redis, RabbitMQ, CouchDB, Elasticsearch, and Solr to support distributed applications; deployed containerized workloads on OpenShift and Google Cloud Platform with NAT networking and continuous integration pipelines, applying strong problem solving and decision making to support AI-enabled platforms.
- ❖ **Application Delivery & Engineering Collaboration:** Delivered responsive design improvements using HTML5, CSS, PostCSS, and Webpack while enhancing UX/UI and overall UX across front end systems; collaborated in Scrum environments conducting code review, producing technical documentation, and driving continuous improvement through strong collaboration and modern engineering practices.
- ❖ **CI/CD Optimization:** Enhanced deployment pipelines using GitHub Actions and ArgoCD, accelerating release cycles by 30%.

DevOps Engineer, *Exodus*

Feb 2022 - Oct 2023

Tool & Technologies: *Azure, Terraform, Prometheus, Grafana, Docker, Kubernetes, Linux/Unix, Asp.Net Mvc*

- ❖ **Kubernetes Provisioning:** Automated cluster deployments using Terraform and Helm, cutting provisioning time by 40%.
- ❖ **Data Streaming & Analytics Engineering:** Designed scalable data pipelines using Spark, Flink, and Dataflow, integrating Kinesis and Apache Airflow (Airflow) to orchestrate real-time processing workflows while leveraging BigQuery and GTM for analytics and AI-driven insights.

- ❖ **AI & Cloud Storage Enablement:** Supported AI and ML workloads by integrating APIs with S3-backed storage and GPU-accelerated environments, fostering strong collaboration across engineering teams to deliver scalable, high-performance cloud solutions.
- ❖ **Data Engineering & Analytics Platforms:** Worked as a Data Engineer supporting big data and AI-driven advanced analytics initiatives, designing scalable information system pipelines backed by relational database architectures while applying strong problem solving and maintaining clear technical documentation.
- ❖ **Quality Engineering & Collaborative Delivery:** Strengthened platform reliability through unit test validation, UAT coordination, and structured code review across .NET and Swift applications, fostering strong collaboration among engineering teams to deliver secure, scalable data systems.
- ❖ **Incident Management:** Established proactive monitoring and logging of software application using with Prometheus and Grafana, and ELK stack, significantly reducing Mean Time to Detection (MTTD) of issues.
- ❖ **Zero-Downtime Deployments:** Implemented canary releases and feature toggles to ensure uninterrupted service delivery.
- ❖ **Automation Scripts:** Developed Python scripts that saved over 50 hours of manual work monthly.

Build and Release Engineer, Exodus

May 2021 – Feb 2022

Tools & Technologies: Docker, Linux/Unix, React.js, Shell Scripts, Docker, Asp.Net, Kubernetes, Ansible, C#

- ❖ **Pipeline Refinement:** Optimized Jenkins pipelines, reducing build times by 20% and supporting rapid feature rollouts.
- ❖ **Infrastructure Automation & CI/CD:** Implemented automated CI/CD pipelines using Puppet and Flux to manage infrastructure deployments, applying strong problem solving to optimize kernel-level configurations and ensure reliable DHCP service management across distributed systems.
- ❖ **Version Control Management:** Administered Git repositories, implementing branching strategies and code review best practices.
- ❖ **Artifact Management:** Maintained and optimized package repositories (e.g., Nexus, Artifactory) to streamline dependency management.
- ❖ **System Monitoring & Debugging:** Integrated monitoring tools such as Prometheus and Grafana to track build failures and proactively resolve issues.

Cloud Engineer, Busha

Dec 2018 – Apr 2021

Tools & Technologies: Docker, Linux/Unix, React.js, Shell Scripts, Docker, Asp.Net, Kubernetes, Ansible, C#

- ❖ **Monitoring & Reliability:** Developed monitoring systems that improved system uptime and reduced customer complaints.
- ❖ **Service Level Metrics:** Defined and implemented SLIs, SLOs, and SLAs, enhancing system reliability and client satisfaction.
- ❖ **Infrastructure as Code:** Automated infrastructure provisioning using Terraform on AWS and Azure, improving scalability and minimizing manual errors.
- ❖ **CI/CD Implementation:** Built and managed CI/CD pipelines with Jenkins, ensuring secure and efficient release cycles.

Product Manager, SureGifts

Mar 2015 – Aug 2018

Tools & Technologies: Docker, Linux/Unix, React.js, Shell Scripts, Docker, Asp.Net, Kubernetes, Ansible, C#

- ❖ **Product Roadmap & Strategy:** Defined and executed product roadmaps, aligning business goals with technical feasibility to drive product growth.
- ❖ **Agile Development Leadership:** Led cross-functional teams in Agile sprints, ensuring timely delivery of features and enhancements.
- ❖ **Stakeholder Collaboration:** Worked closely with engineering, marketing, and sales teams to translate business requirements into technical solutions.
- ❖ **Platform Optimization:** Spearheaded improvements in platform performance, reducing load times and enhancing user experience.

- ❖ Feature Development: Designed and launched new product features, increasing customer engagement and retention.

EDUCATION & CERTIFICATIONS

- ❖ Master of Science in Food Science and Processing Technology
2014
- ❖ Bachelor of Science in Food Science & Technology
2010

Certifications

- ❖ *AWS Certified Developer – Associate*
- ❖ *AZ-104: Azure Administrator Associate*
- ❖ *Certified Kubernetes Administrator (CKA)*
