SUMMARY

Senior/Staff Platform and Site Reliability Engineer with 7+ years in cloud, DevOps, and infrastructure engineering and 10+ years across technology and product delivery in SaaS, fintech, banking, and crypto. Builds reliable multi-cloud foundations, Kubernetes platforms, Terraform-driven infrastructure, delivery systems, and production observability. Led an observability standardization across 14 products that saves US\$300K+ a year while adding APM coverage; reduced MTTR and alert noise 50%+; cut cloud spend 20%, manual provisioning steps 70%, and deployment time 40%; and eliminated 50+ hours of monthly toil.

SKILLS

Cloud & Platforms: AWS, Azure, GCP; Kubernetes, EKS, AKS, Docker, Helm, Argo CD, Linux, Windows Server

Infrastructure as Code & Automation: Terraform, Ansible, Packer, Pulumi; Python, TypeScript, Bash, PowerShell, Go

CI/CD & Developer Experience: GitHub Actions, GitLab CI, Jenkins, CircleCI, GitOps, reusable modules, service templates, golden paths, self-service workflows, AI-assisted engineering

Reliability & Observability: SLIs/SLOs, error budgets, on-call, incident command, RCA, postmortems, DR/RPO/RTO, capacity planning, FinOps; Coralogix, Datadog, Prometheus, Grafana, OpenTelemetry, ELK, CloudWatch, PagerDuty, FireHydrant, Checkly

Systems & Data: PostgreSQL, MySQL, MongoDB, Redis, RDS, Kafka, queues; APIs, microservices, VPC/VNet, DNS, TLS, IAM/RBAC, load balancers

Security & Leadership: PCI-DSS, SOX, secrets management, change controls, compliance automation, technical standards, mentoring, cross-team strategy

EXPERIENCE

Senior Site Reliability Engineer

Euna Solutions · Public-sector SaaS

July 2024 – Present, Remote, Canada

- Led observability standardization on Coralogix across 14 products, saving US\$300K+ annually and adding APM capability not available in the previous Datadog setup.
- Reduced MTTR 50%+ by leading on-call incident response through FireHydrant and PagerDuty and establishing severity levels, escalation paths, SLOs, runbooks, and blameless postmortems with tracked corrective actions.
- Cut alert noise 50%+ by standardizing metrics, logs, traces, dashboards, and actionable alerting with OpenTelemetry, Coralogix, Prometheus, Grafana, Datadog, and CloudWatch.
- Built shared platform workflows and Terraform, Python, TypeScript, and Bash automation across 14 SaaS products, partnering with 5+ engineering teams on service ownership, delivery safety, and operational readiness.
- Reduced monthly AWS spend 20% through rightsizing, reserved capacity, storage and retention optimization, and orphaned-resource cleanup; introduced cost-allocation tagging and reporting that gave teams visibility into their own spend.
- Automated backup, restore, failover, and recovery testing against defined RPO/RTO targets for business-critical services.

Senior Site Reliability Engineer

BMO (Bank of Montreal)

September 2023 – June 2024, Toronto, Ontario

- Supported production infrastructure across 2,000+ RHEL and Windows systems in a PCI-DSS and SOX-regulated financial-services environment.
- Automated repeatable provisioning with Terraform, Ansible, and Packer, reducing manual deployment steps 70% and improving environment consistency.
- Improved performance, capacity, and resource visibility through integrated monitoring, diagnostics, and utilization analysis.

- Led root-cause analysis and preventive remediation for production incidents, reducing recurrence quarter over quarter.

DevOps Engineer

Exodus · Crypto wallet platform

February 2022 – August 2023, Remote

- Built reusable Kubernetes platforms with Terraform, Helm, Argo CD, and GitOps, improving environment provisioning and deployment time 40%.
- Developed Python, Bash, and Go automation for deployment, configuration, and health checks, eliminating 50+ hours of repetitive operational work each month.
- Improved GitHub Actions delivery workflows with validation, security, deployment, health-check, and rollback gates for 20+ engineers.
- Implemented Prometheus and Grafana monitoring with actionable alerting, improving detection speed and production insight across distributed services.

Build and Release Engineer

Exodus

May 2021 – February 2022, Remote

- Optimized Jenkins pipelines, reducing average build time 20% through caching, parallelized tests, and shared pipeline components.
- Standardized Git-flow, pull-request, test, and release gates and streamlined Nexus dependency management across 10+ microservices.
- Implemented automated artifact management and dependency scanning using Nexus, ensuring consistent and secure build outputs.

Cloud Engineer

Busha · Crypto exchange

December 2018 – April 2021, Lagos, Nigeria

- Designed and operated secure AWS infrastructure with Terraform for a fintech platform serving 100,000+ users, reducing environment setup from days to hours.
- Ran blockchain node monitoring, wallet-service availability, and security controls for hot and cold wallet infrastructure.
- Built Jenkins CI/CD pipelines for Docker and ECS services, enabling consistent releases across staging and production.
- Operated PostgreSQL, Redis, Celery queues and workers, replication, backups, and restore testing for high-availability services.
- Implemented monitoring and alerting with CloudWatch, Prometheus, and Grafana to identify and resolve performance issues early.

Product Manager

SureGifts

March 2015 – August 2018, Lagos, Nigeria

- Led cross-functional Agile teams of 8+ to translate business and technical requirements into platform capabilities serving 50,000+ customers.
- Drove product performance improvements and launches that increased monthly active users 35% year over year.
- Defined and executed the product roadmap, prioritizing features based on user feedback and market analysis.

CERTIFICATIONS

Certified Kubernetes Administrator (CKA) · AWS Certified Developer – Associate · AZ-104: Microsoft Azure Administrator Associate

EDUCATION

M.Sc. & B.Sc., Food Science and Technology — Federal University of Agriculture, Abeokuta, Nigeria
