

DIPO OGINNI

Staff Platform Engineer | Cloud Platforms, Developer Systems & AI

+1 (905) 981-0153 | coginni@gmail.com | linkedin.com/in/dipo-oginni | Ontario, Canada (Remote)

PROFESSIONAL SUMMARY

Staff-level platform engineer with 10+ years of experience building cloud foundations, developer systems, and reliable distributed services across SaaS, fintech, and financial services. Hands-on with TypeScript, Node.js, GraphQL, Go, Python, PostgreSQL, MongoDB, AWS, GCP, Kubernetes, Terraform, CI/CD, observability, and AI-assisted engineering. Known for combining 0-to-1 execution with pragmatic architecture, product judgment, and cross-team technical leadership.

CORE SKILLS

Cloud & Platform: AWS, GCP, Kubernetes, Docker, Terraform, Helm, Linux

Application Platforms: TypeScript, Node.js, GraphQL, Go, Python, APIs, microservices

Data & Messaging: PostgreSQL, MongoDB, Redis, queues, caching, high-volume pipelines

Delivery & IaC: GitHub Actions, Jenkins, GitOps, Terraform, Pulumi, automated testing

Reliability: Prometheus, Grafana, Datadog, tracing, SLOs, incident response

AI Engineering: LLM APIs, agent workflows, AI-assisted development and operations

Architecture: Scalability, performance, security, networking, system design

Leadership: Technical direction, mentoring, stakeholder alignment, product judgment

PROFESSIONAL EXPERIENCE

Senior Site Reliability Engineer | Euna Solutions

July 2024 – Present | Remote, Canada

- Shaped platform architecture and observability across 15+ SaaS products, improving the scalability, performance, and operability of distributed services
- Led on-call incident response and blameless postmortems using PagerDuty and JIRA; standardized severity levels, escalation paths, and runbooks to reduce MTTR and prevent repeat failures
- Automated backup, restore, failover, and disaster-recovery validation to meet defined RPO/RTO targets for business-critical systems
- Cut monthly AWS expenses by 20% through rightsizing, reserved capacity, resource cleanup, and cost-visibility improvements
- Partnered with 5+ product and engineering teams on architecture, delivery, security, performance, and reliability while preserving team ownership
- Built Go, Python, TypeScript, and Bash tooling and APIs for infrastructure automation, service integration, diagnostics, and operational workflows

Senior Site Reliability Engineer | BMO (Bank of Montreal)

Sept 2023 – June 2024 | Toronto, ON

- Supported production infrastructure across 2,000+ RHEL and Windows servers in a high-compliance financial services environment governed by PCI-DSS and SOX
- Automated repeatable environment provisioning with Terraform, Ansible, and Packer, reducing manual deployment steps by 70%
- Implemented performance tuning and capacity management through integrated monitoring, improving resource utilization and identifying cost savings
- Led root cause analysis for production incidents and implemented preventive measures that reduced recurrence rates quarter over quarter

DevOps Engineer / Exodus

Feb 2022 – Oct 2023 | Remote

- Built Kubernetes platforms with Terraform, Helm, and GCP/AWS foundations, reducing deployment time by 40% and enabling consistent scale-out patterns
- Built proactive monitoring infrastructure with Prometheus and Grafana, cutting Mean Time to Detection (MTTD) significantly across all production services
- Built Python, Go, and Bash tooling for deployment, configuration, and health checks, eliminating 50+ hours of repetitive operational work each month
- Improved GitHub Actions CI/CD workflows with automated validation, deployment checks, and rollback support, increasing build reliability and release frequency for 20+ engineers

Build and Release Engineer / Exodus

May 2021 – Feb 2022 | Remote

- Optimized Jenkins CI/CD pipelines, reducing average build times by 20% through caching strategies and parallelized test execution
- Enforced Git-flow branching and pull request workflows, improving code quality and reducing regression-related incidents
- Administered Nexus artifact repository and streamlined dependency management across 10+ microservices

Cloud Engineer / Busha

Dec 2018 – Apr 2021 | Lagos, Nigeria

- Provisioned AWS infrastructure with Terraform for a fintech platform serving 100,000+ users, including VPCs, subnets, routes, security groups, load balancers, ECS, RDS, and Cloudflare DNS/edge controls
- Built Jenkins CI/CD pipelines for Docker and ECS services, enabling consistent releases across staging and production environments
- Operated PostgreSQL, Redis, Celery queues, async workers, and scheduled jobs; implemented monitoring, replication, backups, and restore testing for high-availability services

Product Manager / SureGifts

Mar 2015 – Aug 2018 | Lagos, Nigeria

- Led cross-functional teams of 8+ across engineering, product, and design to ship data-intensive platform capabilities serving 50,000+ customers
- Drove product performance improvements and successful launches that increased monthly active users by 35% year over year

CERTIFICATIONS

Certified Kubernetes Administrator (CKA) • AWS Certified Developer – Associate • AZ-104: Microsoft Azure Administrator Associate

EDUCATION

M.Sc. — Federal University of Agriculture, Abeokuta | 2014

B.Sc. — Federal University of Agriculture, Abeokuta | 2010
